Problem Statement:

The Cafeteria Menu Display Portal will enhance the management, publication, and accessibility of daily and weekly cafeteria menus across an organization. Administrators will be able to create, update, and publish menus efficiently, ensuring employees have real-time access to meal options. The portal will streamline the approval process for new menus, automate menu scheduling, and maintain a historical record for future reference. Employees can easily view upcoming meals, dietary options, and special offerings, improving cafeteria engagement and meal planning. By centralizing menu management, the platform will reduce manual effort, minimize errors, and enhance the overall dining experience for employees.

Objective:

The main objective of the Cafeteria Menu Display using ServiceNow project is to digitize and automate the process of managing and publishing cafeteria menus. It aims to provide a centralized platform where menu details can be easily created, updated, and accessed in real time. The system reduces manual effort, improves accuracy, enhances transparency, and ensures that users always have access to up-to-date cafeteria information.
